(419) 230-2368

Experience:

JPMorgan Chase & Co.   **Columbus, Ohio**
Software Engineer   June 2020- Present

- Worked as a full stack developer on modernization and automation in the Legal Response space, building cloud native applications in Java with React front ends
- Managed deployments of numerous microservices via Jenkins CI/CD server
- Work as a Java developer on the Trading Technology team, working to decommission a large monolithic application that takes in large volume and migrate towards microservices while adhering to strict testing and ensuring stability.

Projects:

Tuttlepower.com
HTML, CSS

- A simple landing page to collect different links to my internet presence as well as test different technologies.
- Runs Lighthouse via Github actions upon push.

Aurelius
React, Python, Flask

- An attempt at creating a boilerplate for future personal applications that utilizes and connects a React frontend to a Flask backend that deploys to Heroku.
- Plans to implement initial testing setup as well as CI/CD features such as code coverage analysis.

Skills:

Languages and Frameworks: Java, Spring Boot, Python, Flask, Pandas, SQL, React
